

Aya Gare

Senior Product Manager with 9+ years across product and engineering, including 4 years leading technical products and complex cross-functional initiatives. I approach product work as an engineer first: understanding how systems and data behave, using customer and operational signals to isolate the underlying problem, and translating that understanding into clear product strategy and execution. Deep experience building data products, moving customer and behavioral data across systems, and translating complex data into intelligent insights and customer-facing actions, with expertise spanning identity resolution, behavioral data activation, messaging infrastructure, personalization, analytics, and AI/ML.

 Brought in as Tie's first Product Manager, acting as Head of Product to set the strategy, target customer, success metrics, and roadmap.

 Recruited to StackAdapt to help build its email vertical from the ground up, scaling it to 20K+ brands and multi-million-dollar ARR.

 Joined Klaviyo to scale email-sending infrastructure to 420M sends/hour, maintaining 100% uptime through peak BFCM traffic.

Experience

Tie / Founding Senior Product Manager / Remote / Oct 2025 – Jan 2026

- Unified executive leadership around ICP, North Star metrics, and OKRs to drive go-to-market strategy for a 0 to 1 multi-tenant SaaS AI/ML platform that helps brands identify anonymous shoppers and enrich CDP/CRM profiles with probabilistic scoring and rules-based activation.
- Established a structured Voice of Customer (VoC) mechanism and re-engineered the PDE (Product, Design, Engineering) process, working directly with engineering to evaluate technical feasibility and tradeoffs and translate constraints into Jira-tracked, sprint-ready requirements across distributed teams.
- Led Tie Lite, a lightweight product extension built using Zapier and Google Tag Manager to bring the platform's core capabilities to brands beyond the primary integration partners.
- Authored high-fidelity PRDs for real-time de-anonymization and identity graph filtering, including detailed API specifications for enterprise integrations, enabling event-driven activation while protecting consumer privacy and supporting regulatory compliance.

PortaPerch / Founder & Product Lead / Boston, MA / Apr 2025 – Oct 2025

- Defined a smart litter system that passively tracks cat weight and litter box behavior to flag health changes early; directed 0 to 1 product strategy and prototyping, modeling the mechanical design in SolidWorks and Fusion and defining sensor-driven data collection for actionable insights.
- Conducted surveys and 40+ user interviews to validate product-market fit, uncovering 50%+ willingness-to-pay at \$100–\$400 and confirming monetization potential.
- Built investor-ready pitch materials emphasizing defensible IP, behavioral data loops, and projected ROI.

StackAdapt / Technical Product Manager / Remote / Jan 2024 – Apr 2025

- Launched a 0 to 1 email vertical unifying first-party customer data across advertising and lifecycle marketing, leading roadmap, dependency, and launch-readiness alignment across 5 cross-functional pods to scale to 20K+ brands and 1.5M+ campaigns/year, generating multi-million-dollar ARR within the first year.

- Built and scaled data-driven messaging infrastructure, including CRM/event-triggered flows, Dynamic Creative Optimization (DCO), and recommendation models, improving targeting, acquisition, cross-sell, and retention.
- Implemented deliverability infrastructure (SPF, DKIM, DMARC) achieving 95% inbox placement and <2% bounce rate; migrated 200+ clients with GDPR/CCPA/CAN-SPAM/CASL-compliant footers, supporting SOC 2 and ISO 27001 compliance requirements.
- Developed a personalized template editor with merge tags and offer ranking, driving a 9.5% revenue increase; partnered with design, engineering, and data science on implementation and A/B testing, and enabled GTM teams through launch playbooks.

Klaviyo / Technical Product Manager / Boston, MA / Apr 2022 – Jan 2024

- Drove roadmap alignment for high-scale messaging and behavioral data infrastructure before, during, and after Klaviyo's IPO; used SQL, Amplitude, and Mixpanel to analyze top-sender insights and prioritize event ingestion and segmentation infrastructure behind 250B+ updates across systems processing 0.5+ petabytes.
- Dug into delivery pipeline and webhook logs to pinpoint where sends were bottlenecking, then shipped Pre-Rendering and Smart Recipient Batching based on those findings, increasing throughput to 420M sends/hour and delivering a +10% open rate lift while maintaining 100% uptime through 800M+ peak sends.
- Released a Campaign Scheduling API powering 311B+ annual sends with full UI and integration parity; introduced telemetry, observability, anomaly detection, and visualization tooling to improve visibility into system performance.
- Prioritized reliability features safeguarding customer trust at scale, helping position Klaviyo for IPO at \$903M ARR and a \$9B valuation.

Medtronic / Software Engineer I & II / Boston, MA / Oct 2019 – Apr 2022

- Led cross-functional execution for the 0 to 1 commercial launch of the Hugo™ RAS robotic platform as Scrum Master for distributed QA and software teams, contributing to year-over-year doubling of procedure volume.
- Built Simulink-based fault injection tools achieving 98.5% trial success rate and Python telemetry dashboards enabling predictive alerts and anomaly detection in high-load clinical scenarios.

Medtronic / Quality Engineer II / Danvers, MA / Oct 2018 – Oct 2019

- Led cleanroom yield optimization using DMAIC and root-cause analysis, improving yield by \$8K/month while ensuring FDA, ISO, and EU MDR compliance across manufacturing processes.

Newell Brands / Validation Engineer / Boca Raton, FL / Dec 2017 – Aug 2018

- Validated CAD/FEA designs and physical testing (ASTM, ISO, UL) across global product lines to support safety certification and go-to-market approval.

Pratt & Whitney (Belcan) / Control Systems Engineer / Palm Beach, FL / Mar 2017 – Dec 2017

- Developed Simulink-based closed-loop engine simulations and test logic for DO-178B flight control software certification.

General Electric (Belcan) / Structural Analysis Engineer / Palm Beach, FL / Oct 2016 – Apr 2017

- Modeled turbine blade fatigue and vibration using ANSYS/NX; automated CAD validation and refined component tolerances across high-stakes energy systems.

Education

Northeastern University / MS Coursework in Computer Science / Boston, MA

Florida Atlantic University / BS in Mechanical Engineering, Tau Beta Pi Honors / Boca Raton, FL
