Senior Technical Product Manager in SaaS with 9+ years of experience, including 4 years in product and 5 years in engineering. Specializes in data platforms, CDPs/CRMs, identity resolution, messaging infrastructure, AI/ML-powered personalization, and using customer behavior to trigger the right action at the right time. Shaped Tie's founding product strategy to help brands identify and act on shopper behavior; led StackAdapt's 0 to 1 email vertical to extend the use of customer data from programmatic advertising into lifecycle marketing; and scaled Klaviyo's messaging infrastructure through its \$9B IPO, improving the reliability and throughput brands depend on for high-volume campaign delivery.

Experience

Tie / Founding Senior Product Manager / Remote / Oct 2025 - Jan 2026

- Unified executive leadership around the ICP, North Star metrics, and market strategy for an ML-driven visitor identification platform that helped brands identify anonymous shoppers, enrich CRM profiles, and combine probabilistic shopper scoring with rules-based activation to decide the next best action for each shopper, including which discount to show, whether to include them in an email campaign, and whether to target them with an ad. Used that strategy to drive roadmap prioritization and stakeholder alignment.
- Established a structured Voice of the Customer (VoC) mechanism and re-engineered the PDE (Product, Design, Engineering) process to connect customer feedback, technical constraints, and delivery priorities across distributed teams.
- Authored high-fidelity PRDs for real-time de-anonymization and identity graph filtering, enabling event-driven activation systems that used enriched shopper data to power lifecycle marketing, targeting, timing, and campaign performance while protecting consumer privacy and supporting marketing compliance.

PortaPerch / Founder / Remote / Apr 2025 - Oct 2025

- Defined a smart litter system that passively tracks cat weight and litter box behavior to flag health changes early, and created investor-ready pitch materials focused on defensible IP and projected ROI.
- Directed 0 to 1 product strategy and prototyping, modeling the mechanical design in CAD, and defining sensor-driven data collection for actionable insights.
- Conducted surveys and 40+ user interviews to validate product-market fit, uncovered willingness-to-pay thresholds, and translated qualitative pain points into technical requirements to inform product decisions.

StackAdapt / Technical Product Manager / Remote / Jan 2024 - Apr 2025

- Launched a 0 to 1 email vertical that unified first-party customer data across advertising and lifecycle marketing in a single workflow, orchestrating cross-channel campaigns to enable connected customer journeys. Scaled the vertical to 20K+ brands and 1.5M+ campaigns/year, generating multi-million-dollar ARR, while leading delivery across 5 cross-functional pods and driving roadmap prioritization, scoping, and stakeholder alignment across engineering, marketing, and product.
- Built and scaled data-driven messaging infrastructure, including CRM- and event-triggered flows, Dynamic Creative Optimization (DCO), recommendation models, real-time pipelines, and email authentication protocols (SPF, DKIM, DMARC). Used real-time operational and behavioral data to improve targeting, engagement, send performance, acquisition, cross-sell, retention, and deliverability, achieving 95% inbox placement and <2% bounce rates.

- Developed a personalized template editor with merge tags, content targeting, and offer ranking, driving a 9.5% revenue increase, while partnering with data science to run A/B testing and experimentation, migrating 200+ clients, and enabling GTM teams through launch playbooks and training to accelerate adoption and revenue.

Klaviyo / Technical Product Manager / Boston, MA / Apr 2022 - Jan 2024

- Drove roadmap alignment for high-scale messaging and behavioral data infrastructure before, during, and after Klaviyo's IPO. Used customer insights from top senders to prioritize event ingestion, data trust, and the segmentation infrastructure behind 250B+ updates across systems processing 0.5+ petabytes, while supporting low-latency, high-throughput systems for real-time segmentation, rendering, and campaign delivery.
- Shipped Pre-Rendering and Smart Recipient Batching to remove delivery bottlenecks and push throughput to 420M sends/hour, raising experimentation velocity through A/B testing frameworks and delivering a +10% open rate lift. Maintained 100% uptime through 800M+ peak sends by prioritizing reliability features for high-volume sending and using incident analysis and operational insights to identify failure modes and drive system improvements.
- Released a Campaign Scheduling API with full UI and integration parity, and introduced telemetry, observability, anomaly detection, data analytics, and performance monitoring tooling. Turned those signals into proactive operational insights and improved visibility into operational metrics, system performance, and event-level behavior across infrastructure supporting 311B+ annual sends and IPO readiness.

Medtronic / Software Engineer II / Boston, MA / Oct 2019 - Apr 2022

- Led cross-functional execution for the 0 to 1 commercial launch of the Hugo RAS robotic platform, serving as Scrum Master for distributed QA and software teams and improving sprint velocity within an Agile/Scrum environment.
- Developed Simulink-based fault injection tools to simulate edge-case failures and validate robotic subsystems, improving trial success rates to 98.5% and ensuring system performance, reliability, and safety under high-load conditions.
- Built real-time telemetry dashboards in Python to enable predictive alerts and anomaly detection, transforming system data into actionable insights and translating complex mechanical sensor data into software requirements while supporting CI/CD workflows and system observability.

Medtronic / Quality Engineer II / Danvers, MA / Oct 2018 - Oct 2019

Newell Brands / Validation Engineer / Boca Raton, FL / Dec 2017 - Aug 2018

Pratt & Whitney / Belcan Contract, Control Systems Engineer / Palm Beach, FL / Mar 2017 - Dec 2017

General Electric / Belcan Contract, Structural Analysis Engineer / Palm Beach, FL / Oct 2016 - Mar 2017

Expertise

Development / Python · Java · SQL · JavaScript · HTML/CSS · REST APIs & SDKs · Git · Agile/Scrum · Cursor

Strategy / Figma · Miro · Claude · ChatGPT · OKRs · Roadmapping · Product Discovery · User Research · GTM · Stakeholder Management · Competitive Analysis · Prioritization · Influence Without Authority · Systems Thinking

Compliance / GDPR · CCPA · CAN-SPAM · CASL · SPF/DKIM/DMARC · SOC 2 · ISO 27001 · FDA/ISO/EU MDR

Education

Northeastern University / MS Coursework in Computer Science

Florida Atlantic University / BS in Mechanical Engineering (Tau Beta Pi Honors)
